

How to use your Profile Removal Tool

Use the tip of the profile removal tool to get under the trim profile on the acrylic side, towards the center of the sunbed. Slide the tool under the profile as shown. Run the tool back and forth along the entire length of the trim profile to lift and loosen it. Use your fingers to remove the trim profile. Do not try to pry the trim profile out with the tool. This will damage the profile. Simply press the profile back in place until it clicks, starting at the ends.
