

Replacing Your Booth's Timer

This kit contains the currently manufactured timer used in your booth. The timer box may appear different from the one you are replacing, however the timer functions exactly the same. Included in the kit are four screws, a timer mounting bracket and the timer.

Disconnect the cables connected to the back of the old timer. Unscrew the complete timer box from the unit and discard.

Attach the Timer Bracket to the unit, as shown, using two #8-32 x 1/2" screws. Secure the Timer Box to the bracket with the same type screws, making sure the cables coming out the back of the Timer Box run over the bracket. Connect the cables to the mating cables on top of the booth.
