

IMPORTANT NOTICE

Thank you for your recent purchase of tanning equipment. Please remember, our commitment to your satisfaction continues after you receive your tanning unit. Knowledgeable customer service representatives and product sales representatives are a phone call away if you have questions or need supplies.

Relevant Information Pertaining To Your Purchase

- The electrical requirements on all of the 120-volt units are a 120-volt dedicated circuit with either a 15 amp or 20 amp receptacle and breaker. Refer to the catalog or contact our service department for the proper size.
- The electrical requirements on all 220 volt units are a 220 dedicated circuit with a 20 amp, 30 amp or 50 amp receptacle and breaker. Refer to the catalog or contact our service department for the proper size.
- **WARNING: DO NOT CONNECT UNIT UNTIL YOUR ELECTRICIAN HAS TESTED THE POWER SOURCE WITH A DIGITAL-VOLTMETER.**
- Voltage for a 220 volt unit must be below 230 VAC to maintain your warranty. If voltage is too high or too low, a Buck Booster may be required.
- Using a digital voltmeter, your electrician can determine your exact line voltage. If the voltage is too high or too low, a Buck Booster Transformer will be required to adjust the voltage. Voltage must be below 230 VAC.

If you intent to use your unit for commercial purposes, you may want to maintain an inventory of spare parts to prevent “down-time”. Our service department can assist you in determining what items to keep on-hand.

As you enjoy your unit, please keep in mind that ETS, LLC has been built on customer referrals. Should you know anyone who may be interested in owning a tanning unit, please contact your sales representative so you can be registered in our referral network. When your referral purchases a tanning unit from ETS, LLC we will send you a referral fee for your assistance.

Once again, you are our most important asset. Please feel free to contact any of our knowledgeable representatives to assist you with ALL your tanning needs.
