**Limited Lifetime Warranty**

*SunStar*® warrants your tanning unit to be free of structural defects in its material and workmanship, under normal use, for its lifetime. *SunStar* will repair or replace, at their discretion, any defect to the structure which affects the performance of the unit.

For 6 months from the date of purchase, *SunStar* will provide replacements for parts that prove to be defective in material or workmanship. Acrylic shields, fluorescent lamps, and lamp starters are excluded from this warranty. Labor will be covered for 30 days from purchase date. Normal wear, damage from misuse or abuse, damage incurred in transit, or damage done by unauthorized repairs or modifications are not covered by this warranty.

*ETS, Inc.* disclaims any implied warranty of merchantability or fitness for any period beyond the expressed warranty. Some states do not allow limitations on how long an implied warranty lasts, so the above limitations may not apply to you.

No one has authority to change or modify this Limited Lifetime Warranty in any respect. To obtain service under the Limited Lifetime Warranty, contact *ETS, Inc.* at 1-800-449-3605, and ask for the Technical Service Department.

*ETS, Inc.* shall not be liable for loss of use, loss of time, inconvenience, rental or substitute products, loss of business, loss of income, or any other incidental or consequential damages. Some states do not allow the exclusion or limitation of incidental or consequential damages, so the above limitation or exclusion may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights which may vary from state to state.

All warranty service must be performed by an authorized service person. If your tanning unit must be returned for service, all freight charges must be at your expense. Contact your place of purchase for the address of the *SunStar* Service Center nearest you. Proof of purchase is required to obtain warranty service.

This warranty covers the original purchaser only. This warranty is void if the unit is modified in any manner from its original design.
Welcome

Congratulations on your purchase of this technologically advanced sun tanning unit. It has been designed to provide years of dependable service for you.

Please read all the instructions in this booklet before installing and using the unit. Always be sure to observe all safety precautions.

 ultraviolet radiation. Follow instructions. Avoid overexposure. As with natural sunlight, overexposure can cause eye and skin injury and allergic reactions. Repeated exposure may cause premature aging of the skin and skin cancer. WEAR PROTECTIVE EYEWEAR; FAILURE TO MAY RESULT IN SEVERE BURNS OR LONGTERM INJURY TO THE EYES. Medications or cosmetics may increase your sensitivity to the ultraviolet radiation. Consult physician before using sunlamp if you are using medications or have a history of skin problems or believe yourself especially sensitive to sunlight. If you do not tan in the sun, you are unlikely to tan from the use of this product.

To use, lie down under canopy and pull down as far as adjustment will allow. Minimum use distance from face tanner is 1 inch or 2.54 centimeters. Minimum use distance elsewhere is touching the clear plastic panels. Do not use without clear plastic panels in place. Untanned persons should not tan on consecutive days during their first week of tanning. Never tan more than once a day. Tanning normally appears after the first few sessions and maximizes after approximately four weeks. Tan once or twice per week thereafter to maintain appearance. Persons already having a base tan may begin at advanced levels corresponding to the extent of their base tan.

New lamps emit approximately 20% more ultraviolet radiation during the first 50 hours of operation. Recommended tanning times should therefore be reduced by approximately 20% during that period.

WARNING: • Read the instructions booklet before using this sunlamp product. • All persons in the room should wear protective eyewear when lamps are on. Recommended eyewear: provided eyeshields (Lucas Products Super Sunnies or Intrexco No. 5613/T) or equivalent eyewear as defined under 21 CFR 1040.20. Other types of eyewear may not provide adequate protection.

ONLY THE FOLLOWING LAMPS HAVE BEEN CERTIFIED FOR USE IN THIS EQUIPMENT:

Model ZX32:
- SPEED 175™ Wolff® Model SPD75-T12 Bi-Pin
- Turbo Sun™ 5 Wolff® Model F8-T5-10W

Model ZX32 T:
- SPEED 175™ Wolff® Model SPD75-T12 Bi-Pin

Model ZX32 3F:
- SPEED 175™ Wolff® Model SPD75-T12 Bi-Pin
- Philips Model HPA 400/30s or CosmoTech Model 23045 or 20046 (facial unit)

DISCONNECT POWER CORD BEFORE ATTEMPTING TO CLEAN, RELAMP, OR ENGAGE IN THE MAINTENANCE OF THIS PRODUCT.

THIS EQUIPMENT MUST BE EARTH GROUNDED.

THIS PRODUCT IS IN CONFORMITY WITH PERFORMANCE STANDARDS FOR SUN LAMP PRODUCTS UNDER 21 CFR PART 1040.20
Installation

Unpacking and Inspection

Your sunbed comes in two cardboard cartons, one for the bench and one for the canopy. Open the cartons and remove the bench and canopy as follows.

The bench and canopy are each wrapped in plastic. Pull back the plastic and, with a helper, grasp the bench and pull it from the carton bottom, leaving the plastic wrap and the carton packaging. Do the same for the canopy. Do not attempt to lift either unit with the plastic still on as it may slip.

Note! The cartons are reusable, in the unlikely event that you may find it necessary to return your sunbed.

After unpacking the unit, check to make sure you have received the following:

- Canopy unit
- Bench unit
- Ballast tray
- Pair of gas springs
- Opening handle
- Box containing front and side skirts with mounting screws
- Bag containing necessary assembly hardware, remote bypass, safety goggles, and pillow
- Box containing two stand legs, two cross member supports and four skirt mounting brackets
- Gas spring cover panel

Inspect these items, including the canopy and bench, and make sure they are free from any visible damage. Report the extent of any damage to the transportation company.

Record the serial numbers of the canopy and bench in the area provided on the back of this manual. This information will be required whenever you call customer service.
Tools Required

You will need the following tools to assemble your sunbed.

- Utility Knife
- #2 Phillips Screwdriver
- Allen Wrench
  (Supplied in hardware kit)
- Open-ended wrench
  (Supplied in hardware kit)
- #2 Flat-bladed Screwdriver
Pre-Installation Planning

Before you begin to assemble your sunbed, you should observe the following considerations.

- Your sunbed operates from a 220V AC power source. The unit should be wired to a dedicated circuit as described below. We recommend connection by a professional electrician.
- IMPORTANT! Voltage must be below 230V AC or may require a Buck Booster. Contact ETS service at the number on the back of this guide. Use of a voltage source above 230V AC may reduce the life of some components in your sunbed.
- The SunStar® Super ZX32 Speed 175 System™ requires a dedicated circuit capable of providing 30 Amp service. This unit must be hardwired directly to a junction box.
- Make sure the room in which you intend to use your sunbed is well ventilated. Air from the room is used to cool the sunbed, and a poorly ventilated room may cause the unit to become hot and cause discomfort to the user.
- Your sunbed is designed to operate in an ambient room temperature of 80°F maximum and 70% relative humidity.
- Place your sunbed no closer than 6" from any wall. Make sure that curtains, drapes, and other room furniture do not obstruct the airflow into the end caps or out of the fan opening areas.
- Proper assembly of your sunbed requires three people. Plan to have a couple of helpers assist you.
Hardware Inventory

Use the utility knife to cut open the hardware bag and blister pack. Remove the hardware. Make sure you have the following hardware items.

- **Carriage Bolt, M10 x 60mm**
  - Quantity 2

- **Self-locking Nut, M10**
  - Quantity 2

- **Hex Socket Head Bolt, M8 x 80mm**
  - Quantity 4

- **Hex Socket Head Bolt, M8 x 60mm**
  - Quantity 2

- **Self-locking Nut, M8**
  - Quantity 2

- **Plastic Trim Cap**
  - Quantity 4

- **Plastic Spacer, 15mm**
  - Quantity 4

- **Flat Washer, M8**
  - Quantity 12

- **Foot Caps**
  - Quantity 4

- **Clevis Fork, M10 Long**
  - Quantity 4

- **Hex Socket Head Bolt, M8 x 20mm**
  - Quantity 8

- **Plastic Spacer, 15mm**
  - Quantity 4
Installation - Hardware Inventory

Hex Key
(Allen Wrench), 6mm
Quantity 1

Open End Wrench,
13mm/17mm
Quantity 1
Remote Control Bypass Plug
Quantity 1

Safety Goggles
Quantity 1
Assembly Procedures

Stand Assembly

1. Fit the cross member supports (A) to the stand legs (B) using the M8 x 20mm bolts (C) and the M8 washers (D). Assemble the bolts a few turns only.

2. After the stand is assembled, tighten all bolts.

Tip: The rectangular hole on the outside of the stand leg channel is for Allen wrench access. Insert the Allen wrench into the outside rectangular hole. Next slide the washer onto the bolt and the bolt onto the Allen wrench inside the stand channel.
3. Place the foot caps (B) under the stand legs (A) and position the stand in the approximate spot you want the sunbed.
4. Attach the four skirt mounting brackets to each corner of the stand legs, using eight #10 x 1/2" Phillips head screws. Each location is predrilled to accept a bracket. You will notice that there are two types of brackets. The rear brackets are simply “L” shaped, while the front brackets have a rectangular hole and a slight step.
5. Assemble the lower clevis forks (A) in the stand using the 15mm spacers (B), the M10 x 60mm carriage bolts (C) and the M10 self-locking nuts (D). When assembled the threaded hole in the clevis fork should point upwards.
**Attaching Bench to Stand**

1. Place the sunbed bench carefully on the stand and fasten in position using the M8 x 80mm bolts (A) and the M8 washers (B). Position the bench with the electrical connector toward the back.

**Tip:** Fasten only one bolt on each end before inserting the other two.
Installation - Assembly Procedures

**Attaching Canopy to Stand**

1. You may find it easier to attach the canopy to the stand if you have spacers which span the width of the bench. Two 36“ pieces of 2”x4” framing lumber work well for this purpose. Use these spacers to support the canopy during the next few steps. (See figure 1)

2. Lift the canopy assembly onto the bench (or spacers if you have them) with the arms (A) toward the back.

3. Insert the nylon floating bearings (C) into the canopy assembly arm (A). Attach the arm (A) to the stand legs (B) using the M8 x 60mm bolts (D), the plastic trim washers (F) and the M8 self-locking nuts (E).

**NOTE:** The plastic trim washers (F) have a ridge to engage the plastic caps (G). This ridge must face away from the stand legs to engage properly.

4. Press the plastic trim caps (G) over the bolt heads and self-locking nuts. They should snap onto the plastic trim washers (F).
Canopy body not shown for clarity
5. Lift the canopy assembly to its fully open position and have two helpers hold it.

6. Screw the rod end of the gas springs (A) into the lower clevis forks previously attached to the stand legs. Screw the other clevis forks (B) to the piston end of the gas springs (A).

7. Now insert the bronze bushings (C) into the clevis bracket holes. Line up both clevis forks (B) and lower the canopy until the clevis forks (B) engage the bushings (C) and attach with the clevis pins (D) and retaining rings (E). Pay special attention when lowering the canopy that the clevis forks do not damage the bronze bushings. Bronze is excellent for smooth pivoting applications such as this, but tends to be a soft metal compared to the steel clevis fork.

NOTE: When this assembly is complete, lift and lower the canopy a few times to lubricate the gas springs for optimum performance.
CLEVIS BRACKET

(Canopy body removed for clarity.)
Attaching Handle to Canopy

1. Install the handle by inserting the three #10 x 1” Phillips head screws through the handle and into the predrilled holes on the canopy.

2. Press the rubber leg caps on the stand legs.
Attaching the Skirt

1. Place the side skirts against the two skirt mounting brackets at each end of the sunbed. Using eight #10 x 1/2” screws, attach the side skirts to the skirt mounting brackets. It is best not to tighten the screws until all are installed.

2. Place the ballast tray under the sunbed, with the power cords toward the rear of the unit as shown.

(Sunbed removed for clarity.)
Electrical Connections

At the rear of the sunbed, connect the two canopy power cords and two bench power cords from the ballast tray to their respective power receptacles. Simply match the plug to the receptacle, push on firmly and secure by twisting the threaded locking ring. Connect the Remote Control Bypass plug to either remote control port. Your sunbed will not operate without the Remote Control Bypass plug or a remote system connected. Connect main power cord as described in Pre-Installation Planning.

NOTE: Your sunbed is designed to accept an input from a remote control device. The remote control is optional. If you plan on using a remote system refer to Remote Connections.

ATTENTION: Although the Remote Control Bypass plug provided with your sunbed will work wherever a T-Max® terminator is called for in the series, the T-Max® terminator will not work as a bypass plug. Normally, a bypass plug is needed only when your sunbed is operated without a remote system connected.
Final Assembly

1. Install the gas spring cover onto the stand legs, as shown. Secure using four #10 x 1/2” screws.

Install screws here

2. If not already done, position the ballast tray filter as shown.

3. Position the front skirt against the two brackets on the front of the stand. There is a slot in the underside of the bench that the front skirt is designed to fit into. Center the front skirt and use the skirt latch key to lock the skirt in place. Remove the protective film from the acrylic shield. Your equipment is now ready for use.

(Sunbed removed for clarity.)
Body Fan Assembly

(body fan sold separately)

WARNING! Make sure unit is not connected to any power source before attaching body fan.

Your sunbed is designed to accept a body cooling fan on the foot end canopy endcap. Follow the instructions that come with the body fan for installation.
Remote Connections

Your sunbed incorporates advanced circuitry allowing it to connect and communicate with most remote control systems. If a remote system is to be used, first determine whether the remote system is a T-Max® System or a standard remote system operating with a control relay. Follow the appropriate instructions for your system type.

Warning: The remote connection is not designed to supply or accept high voltage, nor can it provide power to an external timer. The sunbed’s remote interface circuitry operates on 5 volts, attempting to connect it to any higher voltages will damage the sunbed as well as void your warranty.

T-Max® Products

The T-Max® remote systems offer the ultimate in sunbed control, while allowing the Tanner easy straightforward operation. Your sunbed is configured to directly connect to this system. The circuitry inside your sunbed eliminates the need for the T-Max® 1A or 3A when connecting to the T-Max® Manager series. Your sunbed supports the auto addressing feature of the latest T-Max® Manager models and the following parameters: 2, 5, 6, 7, 8, 9, 10, 14, and 15. See your T-Max® manual for descriptions of these parameters and how they function.

T-Max® Manager Remote System

This system is ideal for multiple sunbed installations. Simply connect the RJ-22 modular cable(s), described in the T-Max® Manager manual, into the remote port(s) located on the back of your sunbed and follow the instructions that came with your remote system, noting figure 1. If you have an older T-Max® Manager that doesn’t support auto addressing, set the address, or “id”, of each sunbed manually as described in Setting the address manually. You can place your sunbed at any location in the series.

NOTE: A T-Max® 1A can be substituted for the 3A in figure 1.
**T-Max® 1A and 3A Remote Systems**

The T-Max® 1A and 3A offer the same control as the T-Max® Manager in single sunbed installations. If you’re using a 1A, it must have a chip labelled “master” installed on its circuit board. The remote control bypass plug must not be used in this configuration.

After you have set the T-Max® 1A’s, or 3A’s, address to “0” (refer to your T-Max® user’s guide) and the sunbed’s address to “1” (see right), simply connect the RJ-22 modular cables, described in the T-Max® user’s guide, directly into either port located on the back of the sunbed and either port on the back of the T-Max® 1A or 3A. See figure 2.

### Setting the address manually

Before connecting your sunbed to the T-Max® Manager or T-Max® 1A or 3A, the address of your sunbed must first be set. Set the “id” manually as described below.

#### Setting the “id”

1. Make sure no cables are plugged into your sunbed’s remote ports.
2. Remove and reapply power to the unit.
3. Press and hold the stop button, located on the sunbed display, for three seconds and release. The display should indicate an “id” number from “0f” to “252”.
4. If you are using a T-Max® 1A or 3A as your remote, the “id” of the sunbed must be set to “1”. If you are using a T-Max® Manager each sunbed must be assigned a different “id”. To set the “id” press the timer button, to count up, or the body fan control button, to count down, until the desired number is achieved.
5. Press the stop button to return to the normal display mode.

---

**NOTE**: A T-Max® 1A with a “master” chip can be substituted for a 3A in figure 2.
Remote systems using a Control Relay

Most non-T-Max® remote systems control the sunbed by the use of a relay. The relay operates the sunbed by connecting and disconnecting a pair of wires leading from the sunbed. Refer to the user’s manual provided with your remote system to determine if it operates in this way. To connect your sunbed to this type of system a remote interface kit is required. Call ETS at the phone number listed on the back of this guide to obtain the kit. Figure 3 details a typical connection. Follow the instructions provided with the kit and from the remote’s manual to make the necessary connections.

**Figure 3**
Before You Tan

Before using your sunbed, please note the following important precautions.

- Your skin should be free of cosmetics, tanning oils, or other body lotions prior to tanning except for those specifically made for use with tanning devices. However, do not remove natural body oils by bathing or showering immediately before tanning.

- Your hair should be free of gels, mousses, sprays, or other hair products prior to tanning. These products can cause damage to the sunbed acrylic. As an alternative, a shower cap or towel can be worn to keep treated hair away from the sunbed surfaces.

- As with all electrical appliances, do not operate this device near water or while you are wet.

- Some medication may increase your sensitivity to ultraviolet light. It is recommended that you consult a physician before using this sunbed if taking any medication or if you suspect that your skin might be especially sensitive to sunlight. Included with this manual is an FDA booklet on medications that increase sensitivity to light.

Exposure Times

Follow the guidelines for skin type and exposure times as shown in the table below. Untanned persons should not tan on consecutive days during their first week of tanning. Never tan more than once a day. Tanning normally appears after the first few sessions and maximizes after approximately four weeks. Tan once or twice per week thereafter to maintain appearance. Persons already having a base tan may begin at advanced levels corresponding to the extent of their base tan.

Using Your Sunbed

When connected to the T-Max® Manager or T-Max® 1A or 3A.

A  Face tanner control - Turns face tanners on and off during use. (Units equipped with face tanner only)

B  Body tanner control - Turns body lamps on and off during use. (Units equipped with face tanner only)

C  Body fan control - Controls the speed of the body fan during use.

D  Body fan speed indicator - Indicates speed of fan. (OFF - LOW - MED - HIGH)

E  Timer display - Displays remaining time.

F  Stop button - Interrupts tanning session.

G  Timer button - Turns bed on.

1. Lift the canopy, lie down on the bench (face up), lower the canopy toward your body using the canopy handle. For best results, position the canopy as close to your body as possible.

2. Put on your safety goggles.

3. Assuming the remote system has been set to allow a pre-tanning delay time, the timer display (E) will repeatedly flash the delay symbol “dL” and then the remaining delay time. Press the timer button (G) or wait until the delay time has expired to begin the tanning session. The lamps will turn on and the timer will begin to count down.

4. When the timer reaches 0 the lamps turn off. If you want to stop your session before time expires, press the stop button (F).

5. Raise the canopy by using the outer edge of the canopy, do not push up on the acrylic shield. The cooling fans run for three minutes after the lamps shut off to aid in cooling the sunbed. The timer will indicate “..” as a reminder to clean the sunbed. After the sunbed is cleaned press the timer button and the display will return to “0”.

Using Your Sunbed

When used as a stand alone unit or when connected to a remote system using a control relay.

1. Lift the canopy, lie down on the bench (face up), lower the canopy toward your body using the canopy handle. For best results, position the canopy as close to your body as possible.

2. Put on your safety goggles.

3. Press the timer button (G) to begin the tanning session. The lamps will turn on and the timer will begin to count down.

4. If a tanning time less than the displayed time is desired repeatedly press the timer button (G) to decrease the remaining time.

5. When the timer reaches 0 the lamps turn off. If you want to stop your session before time expires, press the stop button (F). You will have ten seconds to restart with the remaining time, otherwise the timer will reset to 0.

6. Raise the canopy by using the outer edge of the canopy, do not push up on the acrylic shield. The cooling fans run for three minutes after the lamps shut off to aid in cooling the sunbed.

A  Face tanner control - Turns face tanners on and off during use. (Units equipped with face tanner only)

B  Body tanner control - Turns body lamps on and off during use. (Units equipped with face tanner only)

C  Body fan control - Controls the speed of the body fan during use.

D  Body fan speed indicator - Indicates speed of fan. (OFF - LOW - MED - HIGH)

E  Timer display - Displays remaining time.

F  Stop button - Stops tanning session.

G  Timer button - Turns bed on. Timer display shows remaining time. If a lesser time is desired, press timer button until desired time is displayed.
Care and Maintenance

Cleaning After Use

Clean and disinfect your tanning bed's bench and canopy after each use. Use a non-abrasive disinfectant cleaner that does not contain ammonia or ammonia derivatives. Ammonia may damage the acrylic shield. Spray the acrylic lightly with disinfectant and wipe dry with a clean soft cloth. We recommend SunQuest® disinfectant and SunQuest® acrylic cleaner.

Thorough Periodic Cleaning

Introduction

The cooling fans draw air through the bed and over time will cause a dust buildup on the lamps and reflectors. This will reduce the tanning effectiveness of the bed. When a dust buildup is observed, it is necessary to thoroughly clean the inside of the bench and canopy. Warning! Disconnect sunbed from electrical power before cleaning.

Cleaning the Canopy and Bench

Step 1 Remove the acrylic shields and lamps as described in Lamp and Acrylic Replacement.

Step 2 With a soft cloth, wipe the entire length of each lamp to remove any film buildup.

Step 3 Clean both sides of the acrylic shields with a non-ammonia disinfectant cleaner.

Step 4 Wipe the reflectors with a clean damp cloth.

Step 5 Reinstall the lamps and acrylic shields.

Step 6 Clean or replace air filter on top of ballast tray. Replace with a 10” x 24” x 1” furnace filter.

Mechanical Inspection

Your tanning bed has been built for years of service. To ensure trouble-free operation throughout its life, inspect the unit’s mechanical integrity every 400-500 hours of use.

- Inspect the unit’s fasteners verifying that all are firmly in place.
- Inspect gas springs for signs of wear. Gas springs that will not hold the canopy in the full open position when raised should be immediately replaced. See Troubleshooting.
- Inspect the AC power cord and its connections.
- Inspect the acrylic. Broken, cracked or badly scratched acrylics should be immediately replaced.
Lamp and Acrylic Replacement

**Introduction**

To be assured of maximum tanning effectiveness, change lamps after approximately 800-1000 hours of use. Tanning will continue after this time but at a slower rate. To ensure trouble-free operation of your sunbed, replace the lamp starters whenever the lamps are replaced.

**Warning!** Disconnect sunbed from electrical power before servicing.

**Removing/Replacing Acrylic Shield**

The acrylic shields in the bench and canopy are secured in place by hinged profiles which run the length of the bed, both front and back. Simply pry up on the inside edge of the profile, starting at the center of the bed, until it releases its latching action (see figure at right). Continue to pry up the profile across its entire length until it swings back freely. Repeat for the other profile. The long edges of the acrylic shields are now exposed.

Standing at the front of the unit, lift the exposed edge of the acrylic slightly and carefully begin sliding it toward you until it is removed from the sunbed. This might be easier with the help of another person.

After changing the lamps, replace the acrylic shield by carefully aligning it with the channels on the ends of the sunbed and sliding it into place. Close the hinged profile by pushing it back into place until it snaps tight.

**NOTE!**

Be careful. The edges of the acrylic shield may be sharp.
Removing/Replacing Lamps
After removing the acrylic shield, replace lamps as follows.

Step 1  Grasp the lamp at one end and at the middle and turn the lamp one quarter turn. Gently remove the lamp from its holders.

Step 2  Reinstall the lamp by inserting the pins located on the ends of the lamp into the slots on top of the lamp holders and turn the lamp a quarter turn. It should click in place.

Recommended Replacement Lamps
We recommend using the lamps specified below. Use of uncertified lamps is a violation of Federal regulations and will void your warranty. These lamps have an average life of 800-1000 hours of effective tanning use. Lamps used longer than that begin to lose their effectiveness even though they continue to light.

Recommended Replacement Acrylics
Acrylics vary greatly over time in their ability to effectively transmit UV light. Acrylics sold by ETS have been life tested to ensure proper transmission throughout their useful life.

ONLY THE FOLLOWING LAMPS HAVE BEEN CERTIFIED FOR USE IN THIS EQUIPMENT:
Model ZX32:  SPEED 175™ Wolff® Model SPD75-T12 Bi-Pin
Model ZX32T:  SPEED 175™ Wolff® Model SPD75-T12 Bi-Pin
  Turbo Sun™ S Wolff® Model F8-T5-10W
Model ZX32 3F:  SPEED 175™ Wolff® Model SPD75-T12 Bi-Pin
  Philips Model HPA 400/30s or CosmoTech Model 23045 or 20046 (facial unit)
Removing/Replacing Face Tanner Lamp on F Models

After removing the canopy acrylic shield, replace the face tanner lamp as follows:

Step 1  Support the face tanner assembly with your hand while unscrewing the two retaining screws. The face tanner glass casing will swing downward.

Step 2  The lamp can now be exchanged. The lamp holders are equipped with spring contacts which enable the lamp to be removed easily. Remove the old lamp and discard. Install the new lamp, using a clean cloth or paper towel. Ensure that the lamp is firmly seated in the lamp holders.

Step 3  Gently close the face tanner glass casing and lock it closed with the screws. Ensure that the screws firmly secure the glass casing.

Note! Never take hold of the lamp such that your fingers are in contact with the lamp glass. Finger oils will greatly reduce the lamp’s operational life.

WARNING!

Never turn the equipment on while the face tanner is disassembled or when the glass filters have been removed. The direct light can cause severe injury to the eyes and other areas of the body. Immediately discontinue use of this equipment if the face tanner glass is broken or if any unfiltered light can be seen escaping the face tanner assembly.

</table>
| One or more lamps fail to light                                        | 1. Check that lamp is installed correctly.  
2. Switch unit lamp with a lamp that lights, if new lamp lights and old lamp still does not, replace old lamp.                                   |
| The face tanners will not come on                                      | 1. Face tanner operation is initially delayed by 5 seconds.  
2. Face tanners will not relight until cooled.  
3. Replace face tanner lamp, see Removing/Replacing Face Tanner Lamp on F Models.                                                          |
| The canopy will not stay up                                            | **NOTE:** Gas springs are manufactured to hold the canopy in its fully open position as well as allow it to rest fully closed. If left open for an extended period of time some creep down may occur. This is considered normal. Keep the unit closed when not in use. If the canopy will not stay fully open when raised...  
1. Raise and lower the canopy a few times to lubricate gas spring internal seals.  
2. Replace gas springs.                                                                                                           |
| My bed is connected to a T-Max® remote system but I am having trouble getting into “id” mode | You have probably attempted to connect your sunbed to the remote system already. Disconnect the remote plug(s) from the ports at the back of the sunbed, wait 90 seconds and try again. |
| My bed, connected to a T-Max® Manager, did not display “dL” but does indicate: “0”                                              | 1. Remote device has not been set.  
2. The sunbed has not been connected to the remote system, see Remote Connections.  
1. Delay time of T-Max® Manager has not been set.  
2. Delay time has expired and session has begun. Auto start function of T-Max® Manager has been turned off. Press the timer button to turn on lamps. |
<p>| a tanning time and the lamps have come on                              | Body lamps are on when they should be off, have service technician check the contactor.                                                                                                                  |
