

Subject: How To Remove A Cover –
ZX Series Frame

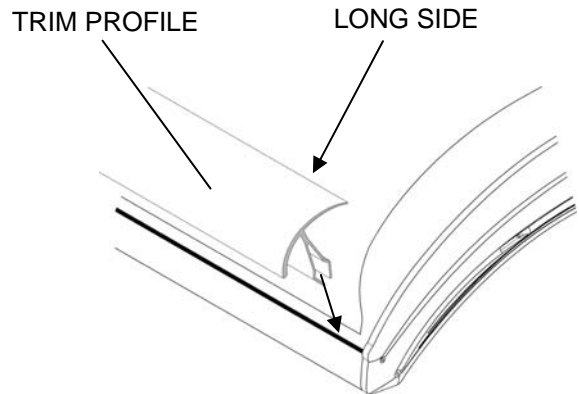

Number: SRV0021

Applicability: Sunvision Elite™ series (all years and models)
Sunvision® ZX30 series (all years)
SunStar® ZX30 series (all years)
SunStar® ZX32 series (K-model and older)

Date: 5/1/2006

Overview: This procedure covers many models, but all have the same cover design. Proceed carefully and avoid pulling any wiring. **Always disconnect power before removing any protective covers.**

- Procedure:**
1. Using a flat, blunt tool, pry the trim profiles from the front and back of the canopy cover (see picture below). NOTE: Older models may have three smaller sections of trim profile in the back instead of one long piece.
 2. Carefully flex the cover in the middle and remove it from the endcaps. The canopy may raise due to the decreased weight.
 3. To reinstall the cover, carefully flex the cover in the middle and insert the ends into the endcaps.
 4. Insert an end of a trim profile into the slot at the edge of the cover, slightly under an endcap. Be sure to hold the cover down with the longer side of the trim profile (see illustration below).
 5. The bench cover comes off in the same manner, however you will need to remove the bench from the stand. It is held in place by four bolts from underneath. You DO NOT need to remove the canopy, but be careful not to disturb the stand.
